Sort 2D Shapes with Venn & Carroll

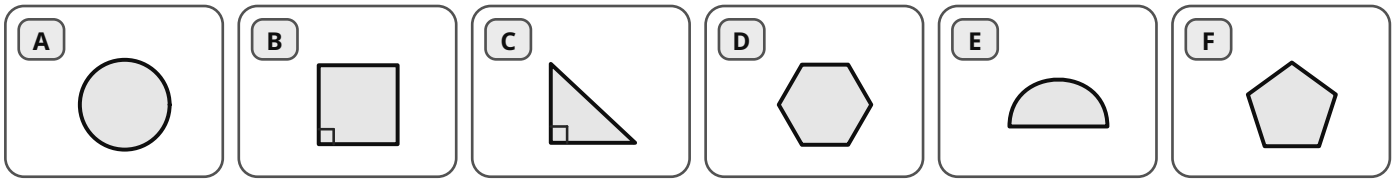

Sort shapes A–F into the right Venn diagram zones (or outside), then place polygons G–J in the 2x2 Carroll table.

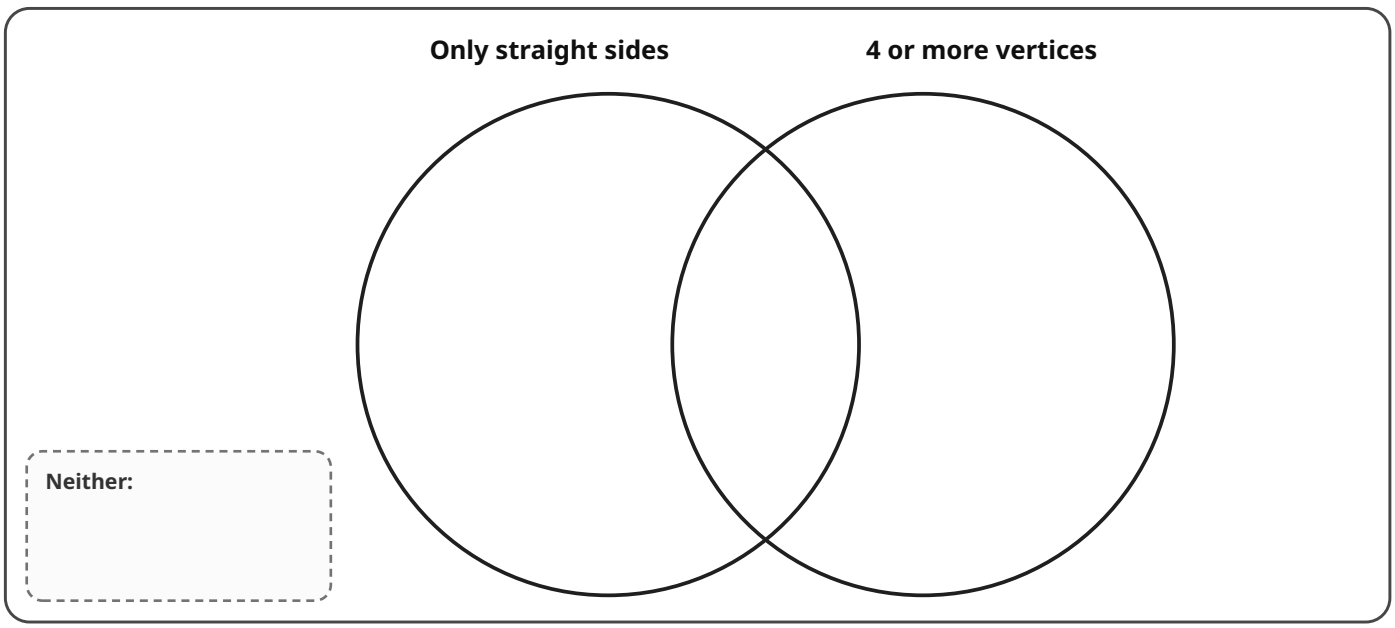

Sacha the organizer owl sorts 2D shapes by checking two geometric properties at the exact same time!

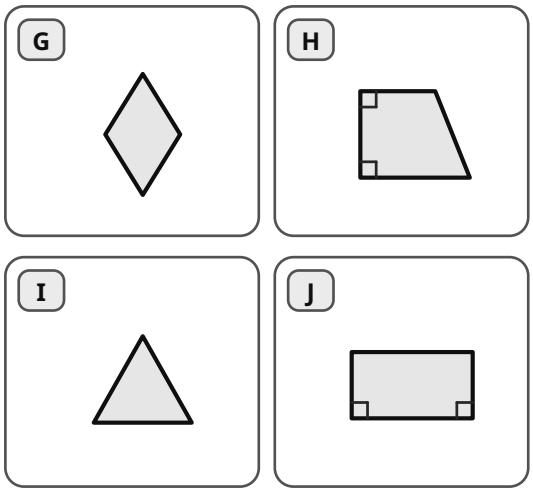

Part 1: Inspect shapes A–F and write each letter in the matching Venn diagram zone (or outer box).

Part 2: Sort polygons G–J into the 2x2 Carroll table by sides and right angles.

	Has a right angle	No right angle
4 sides		
Not 4 sides		

Sacha's tip: shapes that match BOTH rules go in the middle overlap; shapes with curved edges stay outside both circles!
