Nome : _____ Data : _____

PAPILUMO / Classe quarta (9–10 anni)

Moltiplicare una frazione per un intero

Osserva le barre ripetute e scrivi la frazione prodotto. Quando supera l'intero, completa anche il numero misto.

Trucco: in N × a/b il denominatore b resta uguale e si moltiplica solo a per N.

Mina la castora affianca strisce di mosaico uguali: conta tutte le parti colorate!

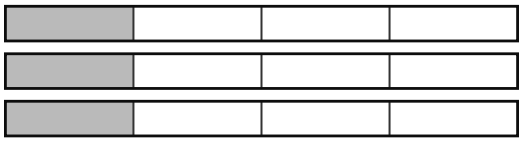

Esempio svolto: 3 × 2/5 = 2/5 + 2/5 + 2/5 = 6/5 = 1 1/5

$$3 \times \frac{2}{5} = \frac{2}{5} + \frac{2}{5} + \frac{2}{5} = \frac{6}{5} = 1\,\frac{1}{5}$$

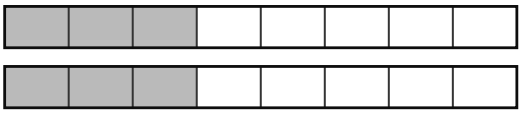

1. Calcola ogni prodotto osservando le barre ripetute (A–F)

A 3 strisce di 1/4

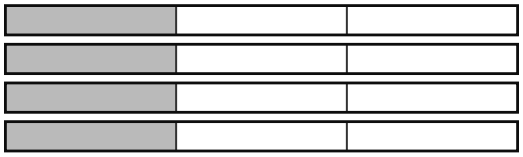

$$3 \times \frac{1}{4} = \frac{\square}{\square}$$

B 2 strisce di 3/8

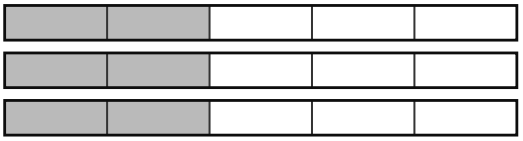

$$2 \times \frac{3}{8} = \frac{\square}{\square}$$

C 4 strisce di 1/3

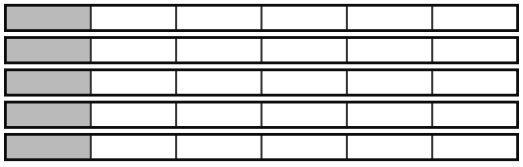

$$4 \times \frac{1}{3} = \frac{\square}{\square} = \square\,\frac{\square}{\square}$$

D 3 strisce di 2/5

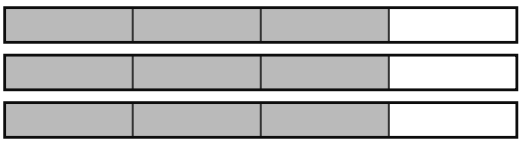

$$3 \times \frac{2}{5} = \frac{\square}{\square} = \square\,\frac{\square}{\square}$$

E 5 strisce di 1/6

$$5 \times \frac{1}{6} = \frac{\square}{\square}$$

F 3 strisce di 3/4

$$3 \times \frac{3}{4} = \frac{\square}{\square} = \square\,\frac{\square}{\square}$$

Consiglio di Mina: il denominatore è sempre quello di una sola barra; conta tutte le parti colorate per il numeratore.
